

**Salicylic Acid 20%**

This beta-hydroxy acid peel is a light chemical peel used to treat acne, melasma, and pigmentary changes in the skin.

**Lactic Acid 55%**

An organic acid that increases cell turnover, eliminates dead skin cells on the epidermis, naturally hydrates the skin, and creates a brighter and smoother complexion.

**Jessner (resorcinol 14%, salicylic acid 14%, lactic 14%)**

Jessner peels are a safe and effective solution for reducing the appearance of hyperpigmentation, acne, smoothing out fine lines and wrinkles while enhancing skin tone and texture.

**Ultra Jessner (resorcinol 14%, salicylic acid 14%, lactic 14%, hydroquinone 2%)**

An Ultra Jessner peel is a superficial to medium peeling agent that helps lighten hyperpigmentation, reduce active acne, fade acne scarring and helps with the appearance of fine to medium wrinkling.

**TCA 15%**

Formulated with trichloroacetic acid; a substance known for its ability to target deep blemishes and wrinkles, TCA peels can help improve acne scarring, reduce dark spots, create brighter skin, and help skin to be more elastic and hydrated.
